

# Weekly Market Review

March 3, 2017

## Chart of the Week

## Weekly Highlights

- **Following President Donald Trump's address to a joint session of Congress,** equities posted their strongest day of 2017 on Wednesday. While the speech did not provide much detail on the upcoming policies, it did reinforce the campaign themes with a more collaborative tone on initiatives for tax reform, boosting economic growth, an overhaul of Obamacare, and \$1 Trillion in infrastructure spending.
- **The federal funds rate hike odds surged** to a 94% likelihood of a 25bps increase at the March meeting, following a speech from Fed Chair Janet Yellen on Friday, which hinted at the move, and President Trump's speech to Congress on Tuesday. This reading is up from a 50% likelihood earlier in the week.
- **The Dow Jones Industrial Average (DJIA) rose above 21,000 on Wednesday,** taking only 24 trading days of setting record highs from the previous 1,000 point level of 20,000, a key psychological level, which was eclipsed on January 25. Earlier in the week, the DJIA broke its streak on Tuesday of 12 straight days of reaching record high closes. This was the longest streak of record high closes since 1987.
- **Snap Inc., the highly anticipated IPO surged 44%** Thursday in its market debut, with its opening price valuing the company at \$33 Billion. The IPO was the largest tech deal since Alibaba went public in 2014.

## Talking Points

- **Among equities,** large cap outperformed small cap. Returns were split fairly evenly across growth and value stocks. International stocks traded mostly in line with domestic equities, while emerging market equities trailed their developed peers.
- **Commodities traded lower,** as gold prices declined.
- **The yield on the 10-year Treasury Note spiked** following President Trump's speech, which highlighted infrastructure spending plans that may lead to inflationary concerns and higher interest rates.
- **The dollar index posted gains,** as the yen and pound weakened, amid increased expectations that the Federal Reserve (Fed) may tighten at its upcoming meeting.
- **Among major economic data released,** GDP for the US economy was reported at 1.9% growth for the second estimate, driven by a 3% increase in personal consumption. Initial jobless claims dropped by more than expected to 223,000 for the prior week. Pending home sales fell by 2.8% in January. Personal income rose by 0.4% in January, beating expectations, while personal spending was reported at +0.2%, slightly below expectations.

## The Economy and Markets

### *A Macro View – February Monthly Recap*

**Domestic equity markets** continued their move higher in February, reaching new record levels almost daily, as investors embraced the potential growth from the new Presidential administration, positive economic data, and strong corporate earnings. President Trump's proposed policies remained in focus, with investors anticipating further details on plans for tax reform, repealing and reforming Obamacare, and international trade, among other initiatives. Growth in the fourth quarter for S&P 500 members, with the majority of companies having reported by the end of February, has shown a roughly +5% increase in revenue and a +7.4% increase in total earnings. Odds of a FOMC rate hike at the March 14-15 meeting increased steadily throughout the month, with some analysts giving it a probability of more than 50% or greater, as market sentiment has continued to improve. The second estimate of fourth-quarter GDP was reported at +1.9%, with consumer spending (the largest part of the economy), rising 3%. The Conference Board's Consumer Confidence Index rose to 114.8 in February, a fifteen-year high.

Within this context, domestic equities were mostly higher during the month. The S&P 500 gained +4%, pushing its YTD return to 5.9%, whereas larger gains were seen on the Dow Jones Industrial Average (DJIA), which advanced 5.2%. The tech-heavy NASDAQ Composite Index rose by +3.9%, and is now up 8.4% YTD. The Russell 2000 Index of small cap stocks returned 1.9%, underperforming the Russell 1000 Index of large cap stocks, which returned +3.9%. Growth stocks outperformed value stocks, with 60bps of difference between the Russell 3000 Growth's return of +4.02% and the Russell 3000 Value's return of 3.42%. In terms of sector performance, the top performers were Healthcare, Utilities, Financials, and Technology, with returns of +6.4%, +5.3%, +5.2%, and 5.1%, respectively. Energy and Telecommunication Services continued to struggle, posting their second consecutive month of negative returns this year, losing 2.2% and -0.4%, respectively. Commodity prices rose slightly by 0.14%. REITs bounced back with a gain of 3.5%, following negative performance in January.

**International equity markets** trailed their domestic peers in February, cooling off slightly after a strong January. The MSCI World ex-U.S. Index increased by +1.6% for the month, and is now up 5.2% YTD. European Purchasing Managers' Index (PMI) readings continued to show growth in February, hitting a six-year high, driven by strength in France and Germany. Emerging markets posted stronger results than international developed, with a gain of 3.1% for the MSCI Emerging Markets Index, which is now up 8.7% YTD. The MSCI EAFE Index, which measures developed markets performance, gained +1.4%. Regionally, EM Asia, EM Latin America, and China were the best relative performers, with returns of +3.64%, +3.57%, and 3.54%, respectively. EM Eastern Europe was the poorest relative performer, losing -3.6%, whereas Japan and developed Europe provided gains that were slightly above 1%.

**Fixed-income markets** mostly posted gains during the month, with the yield on the 10-Year Treasury Note trading within a fairly tight range. The yield curve flattened in February, as intermediate- and long-term yields declined slightly from their January levels, while short-term yields moved higher. Within this environment, the yield on the 10-year U.S. Treasury Note ended the month at 2.36%, down 9 basis points from the 2.45% level at the end of January. Broad-based fixed income posted gains, with the Barclays U.S. Aggregate Bond Index increasing 0.67%. Global fixed income markets performed slightly worse, as the Barclays Global Aggregate ex-U.S. Index gained +0.3%. The Barclays U.S. Corporate High Yield Index increased by +1.46%, and is now up +2.9% YTD. Municipals posted a gain of +0.7%.

The Relative Strength Matrix provides an indication of how the various asset classes have performed relative to one another over the past 30 days. A number greater than 1.0 indicates that the asset class in the far left column has outperformed the corresponding asset class in the top row over the past 30 days. A number below 1.0 means the asset class on the left has underperformed the asset class at the top. The green shading indicates outperformance, and the red shading indicates underperformance.

**Index Overview & Key Definitions**

**Fed, The Fed or FED** refers to the Federal Reserve System, the central bank of the United States. The **Federal Open Market Committee (FOMC)** is the monetary policymaking body of the Federal Reserve System. **Fed Funds Rate**, the interest rate at which a depository institution lends funds maintained at the Federal Reserve to another depository institution overnight. The **European Central Bank (ECB)** is the central bank for Europe's single currency, the euro. The ECB's main task is to maintain the euro's purchasing power and thus price stability in the euro area. The euro area comprises the 19 European Union countries that have introduced the euro since 1999. The **Gross Domestic Product (GDP)** rate is a measurement of the output of goods and services produced by labor and property located in the United States. **Basis Point(s)** is a unit that is equal to 1/100th of 1%, and is used to denote the change in a financial instrument. The basis point is commonly used for calculating changes in interest rates, equity indexes and the yield of a fixed-income security. A **separately managed account (SMA)** is an individual managed investment account offered typically by a brokerage firm through one of their brokers or financial consultants and managed by independent investment management firms (often called money managers for short) and have varying fee structures. The **Consumer Price Index (CPI)** measures the change in the cost of a fixed basket of products and services. The **Producer Price Index (PPI)** program measures the average change over time in the selling prices received by domestic producers for their output. The prices included in the PPI are from the first commercial transaction for many products and some services. **Core CPI** is an additional CPI Index, excludes energy and food item price changes, and measures the "core" or "underlying" rate of inflation. The **PCE (Personal Consumption Expenditure) Index of Prices** is a US-wide indicator of the average increase in prices for all domestic personal consumption. Using a variety of data including U.S. Consumer Price Index and Producer Price Index prices, it is derived from personal consumption expenditures; essentially a measure of goods and services targeted towards individuals and consumed by individuals.

The **Dow Jones Industrial Average (DOW or DJIA)** is an unmanaged index of 30 common stocks comprised of 30 actively traded blue chip stocks, primarily industrials and assumes reinvestment of dividends. The **S&P 500 Index** is an unmanaged index comprised of 500 widely held securities considered to be representative of the stock market in general. The **S&P/Case-Shiller Home Price Indices** measure the residential housing market, tracking changes in the value of the residential real estate market in 20 metropolitan regions across the United States. The **Nasdaq Composite Index** is a stock market index of the common stocks and similar securities listed on the NASDAQ stock market. The **US Dollar Index** is a measure of the value of the United States dollar relative to a basket of foreign currencies. It is a weighted geometric mean of the dollar's value relative to other select currencies (Euro, Japanese yen, Pound sterling, Canadian dollar, Swedish krona (SEK) & Swiss franc). The **Nikkei Index (Nikkei 225 or Nikkei)** is a stock market index for the Tokyo Stock Exchange calculated daily by the Nihon Keizai Shimbun (Nikkei) newspaper since 1950. It is a price-weighted index (the unit is yen), and the components are reviewed once a year. The **FTSE 100 Index (FTSE 100)** is a share index of the 100 companies listed on the London Stock Exchange (LSE) with the highest market capitalization. The **Bloomberg Commodity Index (formerly the Dow Jones-UBS Commodity Index)** tracks prices of futures contracts on physical commodities on the commodity markets and is designed to minimize concentration in any one commodity or sector (currently 22 commodity futures in seven sectors). The **Barclays Capital US Credit Index** is an unmanaged index considered representative of publicly issued, SEC-registered US corporate and specified foreign debentures and secured notes. The **Barclays Capital US Aggregate Bond Index** is a market capitalization-weighted index of investment-grade, fixed-rate debt issues, including government, corporate, asset-backed, and mortgage-backed securities, with maturities of at least one year. The **Barclays Capital US Corporate High Yield Index** covers the USD-denominated, non-investment grade, fixed-rate, taxable corporate bond market. Securities are classified as high-yield if the middle rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below. The index may include emerging market debt. The **Barclays Capital Municipal Bond Index** is an unmanaged index comprised of investment-grade, fixed-rate municipal securities representative of the tax-exempt bond market in general. The **Barclays Capital US Treasury Total Return Index** is an unmanaged index of public obligations of the US Treasury with a remaining maturity of one year or more. The **Barclays Capital Global Aggregate ex-U.S. Index** is a market capitalization-weighted index, meaning the securities in the index are weighted according to the market size of each bond type. Most U.S. traded investment grade bonds are represented. Municipal bonds, and Treasury Inflation-Protected Securities are excluded, due to tax treatment issues. The index includes Treasury securities, Government agency bonds, Mortgage-backed bonds, Corporate bonds, and a small amount of foreign bonds traded in U.S. The **Barclays Capital U.S. 5-10 Year Corporate Bond Index** measures the investment return of U.S. dollar denominated, investment-grade, fixed rate, taxable securities issued by industrial, utility, and financial companies with maturities between 5 and 10 years. Treasury securities, mortgage-backed securities (MBS) foreign bonds, government agency bonds and corporate bonds are some of the categories included in the index. The **Barclays Capital U.S. Corporate High-Yield Index** is composed of fixed-rate, publicly issued, non-investment grade debt. The **Barclays Capital U.S. Corporate 5-10 Year Index** includes U.S. dollar-denominated, investment-grade, fixed-rate, taxable securities issued by industrial, utility, & financial companies, with maturities between 5 & 10 years. The **DJ-UBS Commodity Index Total Return SM** measures the collateralized returns from a basket of 19 commodity futures contracts representing the energy, precious metals, industrial metals, grains, softs and livestock sectors. The **Russell 1000 Index** is a market capitalization-weighted benchmark index made up of the 1000 largest U.S. companies in the Russell 3000 Index. The **Russell 1000 Growth Index** is an unmanaged index considered representative of large-cap growth stocks. The **Russell 1000 Value Index** is an unmanaged index considered representative of large-cap value stocks. The **Russell 2000 Index** is an unmanaged index considered representative of small-cap stocks. The **Russell 2000 Growth Index** is an unmanaged index considered representative of small-cap growth stocks. The **Russell 2000 Value Index** is an unmanaged index considered representative of small-cap value stocks. The **Russell 3000 Index** is an unmanaged index considered representative of the US stock market. The **Russell Midcap Index** is a subset of the Russell 1000 Index. It includes approximately 800 of the smallest securities based on a combination of their market cap and current index membership. The **Russell Midcap Growth Index** is an unmanaged index considered representative of mid-cap growth stocks. The **Russell Midcap Value Index** is an unmanaged index considered representative of mid-cap value stocks. The **HFRX Indices** are a series of benchmarks of hedge fund industry performance which are engineered to achieve representative performance of a larger universe of hedge fund strategies. Hedge Fund Research, Inc. employs the HFRX Methodology (UCITS compliant), a proprietary and highly quantitative process by which hedge funds are selected as constituents for the HFRX Indices. The **University of Michigan Consumer Sentiment Index (MCSI)** is a survey of consumer confidence conducted by the University of Michigan using telephone surveys to gather information on consumer expectations regarding the overall economy. The **CBOE Volatility Index (VIX)** is an up-to-the-minute market estimate of expected volatility that is calculated by using real-time S&P 500 Index option bid/ask quotes. The Index uses nearby and second nearby options with at least 8 days left to expiration and then weights them to yield a constant, 30-day measure of the expected volatility of the S&P 500 Index. The **MSCI EAFE Index** is designed to measure the equity market performance of developed markets outside of the U.S. & Canada. The **MSCI EAFE Growth Index** is an unmanaged index considered representative of growth stocks of Europe, Australasia and the Far East. The **MSCI EAFE Value Index** is an unmanaged index considered representative of value stocks of Europe, Australasia and the Far East. The **MSCI EM (Emerging Markets) Latin America Index** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of emerging markets in Latin America. The **MSCI World ex-U.S. Index** captures large and mid-cap representation across 22 of 23 Developed Markets (DM) countries - excluding the US. With 1,002 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country. The **MSCI Japan Index** is designed to measure the performance of the large and mid-cap segments of the Japanese market. With 320 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Japan. The **MSCI Emerging Markets Index** is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets. The **MSCI Europe Index** is an unmanaged index considered representative of stocks of developed European countries. The **MSCI Pacific Index** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of the developed markets in the Pacific region. The **Barclays Intermediate US Government/Credit Bond Index** is a market capitalization-weighted index of investment-grade, fixed-rate debt issues, including Treasuries, government-related and U.S. corporate securities, with maturities of at least one year and less than 10 years. The **Philadelphia Fed Manufacturing Index** is a regional Federal Reserve Bank index measuring changes in business growth and is constructed from a survey of participants who voluntarily answer questions regarding the direction of change in their overall business activities. The **ISM Non-Manufacturing Index** is an index based on surveys of more than 400 non-manufacturing firms' purchasing and supply executives, within 60 sectors across the nation, by the Institute of Supply Management (ISM) and also tracks economic data, like the ISM Non-Manufacturing Business Activity Index. A composite diffusion index is created based on the data from these surveys that monitors economic conditions of the nation. The **Housing Market Index (HMI)** is based on a monthly survey of NAHB members designed to take the pulse of the single-family housing market. In May 2007, **Markit's U.S. PMI** research was extended out to cover producers of metal goods. In October 2009, Markit's U.S. Manufacturing PMI survey panel was extended further to cover all areas of U.S. manufacturing activity. The **NY Empire State Index** is an index based on the monthly survey of manufacturers in New York State - known as the Empire State Manufacturing Survey - conducted by the Federal Reserve Bank of New York. The headline number for the NY Empire State Index refers to the survey's main index, which summarizes general business conditions in New York State.

The information, analysis, and opinions expressed herein are for general and educational purposes only. Nothing contained in this weekly review is intended to constitute legal, tax, accounting, securities, or investment advice, nor an opinion regarding the appropriateness of any investment, nor a solicitation of any type. All investments carry a certain risk, and there is no assurance that an investment will provide positive performance over any period of time. An investor may experience loss of principal. Investment decisions should always be made based on the investor's specific financial needs and objectives, goals, time horizon, and risk tolerance. The asset classes and/or investment strategies described may not be suitable for all investors and investors should consult with an investment advisor to determine the appropriate investment strategy. Past performance is not indicative of future results.

Information obtained from third party sources are believed to be reliable but not guaranteed. Envestnet|PMC™ makes no representation regarding the accuracy or completeness of information provided herein. All opinions and views constitute our judgments as of the date of writing and are subject to change at any time without notice.

Investments in smaller companies carry greater risk than is customarily associated with larger companies for various reasons such as volatility of earnings and prospects, higher failure rates, and limited markets, product lines or financial resources. Investing overseas involves special risks, including the volatility of currency exchange rates and, in some cases, limited geographic focus, political and economic instability, and relatively illiquid markets. Income (bond) securities are subject to interest rate risk, which is the risk that debt securities in a portfolio will decline in value because of increases in market interest rates.

Exchange Traded Funds (ETFs) are subject to risks similar to those of stocks, such as market risk. Investing in ETFs may bear indirect fees and expenses charged by ETFs in addition to its direct fees and expenses, as well as indirectly bearing the principal risks of those ETFs. ETFs may trade at a discount to their net asset value and are subject to the market fluctuations of their underlying investments. Investing in commodities can be volatile and can suffer from periods of prolonged decline in value and may not be suitable for all investors.

Index Performance is presented for illustrative purposes only and does not represent the performance of any specific investment product or portfolio. An investment cannot be made directly into an index.

Alternative Investments may have complex terms and features that are not easily understood and are not suitable for all investors. You should conduct your own due diligence to ensure you understand the features of the product before investing. Alternative investment strategies may employ a variety of hedging techniques and non-traditional instruments such as inverse and leveraged products. Certain hedging techniques include matched combinations that neutralize or offset individual risks such as merger arbitrage, long/short equity, convertible bond arbitrage and fixed-income arbitrage. Leveraged products are those that employ financial derivatives and debt to try to achieve a multiple (for example two or three times) of the return or inverse return of a stated index or benchmark over the course of a single day. Inverse products utilize short selling, derivatives trading, and other leveraged investment techniques, such as futures trading to achieve their objectives, mainly to track the inverse of their benchmarks. As with all investments, there is no assurance that any investment strategies will achieve their objectives or protect against losses.
