

Chart of the Week

Weekly Highlights

- **Domestic stocks were mostly lower on the week.** Economic data such as retail sales and housing starts were underwhelming and sell-offs in overseas markets dragged down domestic stocks late in the week. German DAX plunged more than 5% during the week and China announced market-cooling measures. The Russell 2000 (Small cap index) advanced to a new high during the week, but fell late in the week and ended lower.
- **Global bond yields continued to slide.** The German 10-year government bond yield closed the week at 0.077%, within striking distance to negative territory. The U.S. 10-year Treasury yield also declined.
- **Commodity indices were higher,** as crude oil prices jumped nearly 10% during the week.

Talking Points

- **Among equities,** large-caps essentially matched the return of small-caps, and growth stocks underperformed value-oriented issues. Domestic stocks underperformed international equities. Developed markets outperformed emerging market stocks.
- **Treasury prices rose during the week.** The yield on the 10-year T-note declined.
- **Commodity indices were higher,** driven by a jump in energy prices. Metals were flat and grains fell.
- **The dollar plunged** this week against a basket of currencies.
- **Among economic data released this week,** both retail sales and housing starts disappointed. Inflation still tame, with core CPI rising 1.8% year-over-year.

THE ECONOMY AND MARKETS

A Macro View – Spring Seeds of Hope

After a long and difficult winter, many investors are wondering whether the Spring thaw will bring with it enough sustenance to reinvigorate the economy. First quarter data was less than upbeat, and despite a modestly positive start to April, several questions remain:

Has oil reached a bottom? Does the US dollar have enough support to continue its upward trajectory? Has the Federal Reserve Bank (Fed) planted enough seeds for domestic growth?

Oil prices continue to weigh heavily on the stock market, as the price for a barrel of crude has precipitously fallen from a peak of \$98 in September 2014 to \$56 as of yesterday's close. It dipped as low as \$45 dollars a barrel in March but has rebounded back in recent weeks, supported by a strengthening in fundamentals and a tightening in supply.

Global quantitative easing along with impending interest rates hikes have buoyed U.S. dollar strength.

The 10 year yield fell to 1.9% yesterday (4/16/15), hovering near all-time historical lows. Prior to 2011, the last time the 10 year yield was under 2% was February 23, 1951. Since that time, it has fluctuated regularly between 1.43% and 3.75%, falling below 2% on 357 of 1,073 trading days over the past four years.

As the Fed lays the groundwork for raising rates, it will have to consider when and at what pace. Although Yellen did not rule out a June hike in the March meeting, the consensus handily favors September. Inflation is expected to remain low, and job growth slowed in March— driven in part by cuts in the energy sector which has historically been a key driver in nonfarm job creation. Nonetheless, unemployment remains relatively stable at 5.5%, and the first quarter marked twelve consecutive months of job gains in excess of 200,000—the longest streak in nearly two decades.

So, does the recovery have legs, or will the engine stall? The signals are mixed. Following Wednesday's disappointing industrial production numbers, estimates of real GDP growth fell to as low as 0.1% according to Atlanta Federal Reserve's new GDPNow¹ indicator; this comes in sharp contrast to GDP growth of 2.2% in Q414. Industrial production has been on the decline for the past three months, and March's decline of 0.6% marked the largest decrease since 2012. A strong U.S. dollar is crippling exports, and weak oil prices have encumbered the operations of energy stalwarts.

On the positive side, consumer spending remains high, and housing starts are on the rise. Residential housing rebounded last month, although by less than expected. The stock market is showing areas of opportunity, particularly in small- and mid-cap, with healthcare demonstrating solid gains. It is worthwhile to note that at this juncture last year, Q1 2014 GDP also contracted, but the economy quickly recovered making positive strides for the rest of 2014. Although first quarter growth may similarly stall, the long term picture should remain robust, as we decelerate from an above trend environment to one of more moderate growth.

Cynthia Crandall
VP, Senior Investment Analyst

1 - The growth rate of real gross domestic product (GDP) is a key indicator of economic activity, but the official estimate is released with a delay. The GDPNow forecasting model provides a "nowcast" of the official estimate prior to its release.

The Relative Strength Matrix provides an indication of how the various asset classes have performed relative to one another over the past 30 days. A number greater than 1.0 indicates that the asset class in the far left column has outperformed the corresponding asset class in the top row over the past 30 days. A number below 1.0 means the asset class on the left has underperformed the asset class at the top. The green shading indicates outperformance, and the red shading indicates underperformance.

INDEX OVERVIEW & KEY DEFINITIONS

Fed, The Fed or FED refers to the Federal Reserve System, the central bank of the United States. The Federal Open Market Committee (FOMC) is the monetary policymaking body of the Federal Reserve System. Fed Funds Rate, the interest rate at which a depository institution lends funds maintained at the Federal Reserve to another depository institution overnight. The ECB is the central bank for Europe's single currency, the euro. The ECB's main task is to maintain the euro's purchasing power and thus price stability in the euro area. The euro area comprises the 19 European Union countries that have introduced the euro since 1999.

Dow or DJIA (Dow Jones Industrial Average) is an unmanaged index of 30 common stocks comprised of 30 actively traded blue chip stocks, primarily industrials and assumes reinvestment of dividends. The S&P 500 Index is an unmanaged index comprised of 500 widely held securities considered to be representative of the stock market in general. The S&P/Case-Shiller Home Price Indices measure the residential housing market, tracking changes in the value of the residential real estate market in 20 metropolitan regions across the United States. The Nasdaq Composite is a stock market index of the common stocks and similar securities listed on the NASDAQ stock market. The US Dollar Index is an index (or measure) of the value of the United States dollar relative to a basket of foreign currencies. It is a weighted geometric mean of the dollar's value relative to other select currencies (Euro, Japanese yen, Pound sterling, Canadian dollar, Swedish krona (SEK) & Swiss franc). The Nikkei 225, more commonly called the Nikkei or the Nikkei index, is a stock market index for the Tokyo Stock Exchange. It has been calculated daily by the Nihon Keizai Shimbun (Nikkei) newspaper since 1950. It is a price-weighted index (the unit is yen), and the components are reviewed once a year. The FTSE 100 Index, also called FTSE 100, is a share index of the 100 companies listed on the London Stock Exchange with the highest market capitalization. FTSE stands for Financial Times Stock Exchange. The DAX (German stock index) is a blue chip stock market index consisting of the 30 major German companies trading on the Frankfurt Stock Exchange. DAX measures the performance of the Prime Standard's 30 largest German companies in terms of order book volume and market capitalization. The information, analysis, and opinions expressed herein are for general and educational purposes only. Nothing contained in this weekly review is intended to constitute legal, tax, accounting, securities, or investment advice, nor an opinion regarding the appropriateness of any investment, nor a solicitation of any type. All investments carry a certain risk, and there is no assurance that an investment will provide positive performance over any period of time. An investor may experience loss of principal. Investment decisions should always be made based on the investor's specific financial needs and objectives, goals, time horizon, and risk tolerance. The asset classes and/or investment strategies described may not be suitable for all investors and investors should consult with an investment advisor to determine the appropriate investment strategy. Past performance is not indicative of future results.

Information obtained from third party sources are believed to be reliable but not guaranteed. Envestnet|PMC™ makes no representation regarding the accuracy or completeness of information provided herein. All opinions and views constitute our judgments as of the date of writing and are subject to change at any time without notice.

Investments in smaller companies carry greater risk than is customarily associated with larger companies for various reasons such as volatility of earnings and prospects, higher failure rates, and limited markets, product lines or financial resources. Investing overseas involves special risks, including the volatility of currency exchange rates and, in some cases, limited geographic focus, political and economic instability, and relatively illiquid markets. Income (bond) securities are subject to interest rate risk, which is the risk that debt securities in a portfolio will decline in value because of increases in market interest rates. Exchange Traded Funds (ETFs) are subject to risks similar to those of stocks, such as market risk. Investing in ETFs may bear indirect fees and expenses charged by ETFs in addition to its direct fees and expenses, as well as indirectly bearing the principal risks of those ETFs. ETFs may trade at a discount to their net asset value and are subject to the market fluctuations of their underlying investments. Investing in commodities can be volatile and can suffer from periods of prolonged decline in value and may not be suitable for all investors. Index Performance is presented for illustrative purposes only and does not represent the performance of any specific investment product or portfolio. An investment cannot be made directly into an index.

Alternative Investments may have complex terms and features that are not easily understood and are not suitable for all investors. You should conduct your own due diligence to ensure you understand the features of the product before investing. Alternative investment strategies may employ a variety of hedging techniques and non-traditional instruments such as inverse and leveraged products. Certain hedging techniques include matched combinations that neutralize or offset individual risks such as merger arbitrage, long/short equity, convertible bond arbitrage and fixed-income arbitrage. Leveraged products are those that employ financial derivatives and debt to try to achieve a multiple (for example two or three times) of the return or inverse return of a stated index or benchmark over the course of a single day. Inverse products utilize short selling, derivatives trading, and other leveraged investment techniques, such as futures trading to achieve their objectives, mainly to track the inverse of their benchmarks. As with all investments, there is no assurance that any investment strategies will achieve their objectives or protect against losses.
