

Chart of the Week

Weekly Highlights

- **Domestic stock prices were lower this week.** Broad equity indices were soft to begin October despite better-than-expected jobs growth in September and the fact that the unemployment rate fell below 6% since mid-2008. Investors have become increasingly concerned that the poor performance of small cap stocks would bleed into broader indices. Earlier this week small caps had declined 10% from their peak in July, meaning they were in correction territory.
- **Global markets were also generally lower on the week.** World markets were broadly lower this week as the European Central Bank has been non-committal about providing additional stimulus to accelerate the region's tepid growth. Many European indices have posted losses on a year-to-date basis. China indices have fallen 10% from their highs, partly in response to the pro-democracy protests in Hong Kong.
- **Treasury prices were higher for the week.** The yield on the benchmark 10-year U.S. Treasury declined this week as investors sought a safe haven from the equity market's decline.
- **Commodity indices plunged again on the week.** Energy dropped sharply on reports of surging supply. Metals also declined, but grains advanced.

Talking Points

- **Among equities,** large-caps outperformed small-caps, and growth stocks outperformed value-oriented issues. Domestic stocks outperformed international equities. Developed markets outperformed emerging market stocks.
- **Treasury prices were higher this week.** The yield on the 10-year T-note declined modestly.
- **Commodity prices plunged again on the week.** Energy and metals fell sharply, but grains rose.
- **The dollar was higher** this week against a basket of currencies.
- **Among economic data released this week,** payroll growth was better than forecast in September, and the unemployment rate declined to 5.9%; manufacturing eased somewhat, but non-manufacturing services rose during the month; pending home sales declined slightly; and initial jobless claims in the latest week unexpectedly decreased.

THE ECONOMY AND MARKETS

A Macro View – September Monthly Recap

Domestic equity markets were broadly lower in September after posting robust gains in August. Stock prices reacted negatively to a perception of slowing growth domestically, continued tepid growth in Europe, below-target growth in China, and the prospect of rising interest rates as the Federal reserve winds down its asset purchase program. However, domestic economic data remains on an uptrend, with the final estimate of second quarter real gross domestic product (GDP) coming in at +4.6%, up from the previous estimate of +4.2%. Employment gains also ramped up in September, with 248,000 jobs added, a significant rise from August's gain of 142,000. In addition, the unemployment rate declined to 5.9%, the first time it has been below 6% since mid-2008.

Despite the seemingly benign backdrop, however, stocks generally declined during September. The S&P 500 lost -1.4% for the month, and is now up +8.3% on a year-to-date basis. The Dow Jones Industrials also declined, shedding -0.2%. The tech-heavy Nasdaq Composite Index gave up -1.8% as technology stocks finally encountered a bout of profit-taking. The Russell 2000 Index of small cap stocks lagged significantly, underperforming the Russell 1000 Index of large cap stocks, with returns of -5.4% and -1.8%, respectively. Growth stocks fared better than value stocks during the month. In terms of sector performance, consumer staples was the strongest performer on a relative basis, gaining +0.6%, while energy was the poorest performers, posting a decline of -7.6%.

International equity markets were also lower in September, reacting negatively to meager growth in the eurozone region and ongoing geopolitical and military tensions in Ukraine and the Middle East. The MSCI World ex-U.S. Index declined -4.1% for the month. Emerging markets performed poorly, in part due to concern that potentially rising interest rates would hamper growth. The MSCI Emerging Markets Index dropped -7.4% for the month, and the MSCI EAFE Index, which measures developed markets performance, was down -3.8%. Regionally, Japan was the best performer on a relative basis, with the MSCI Japan Index declining -0.6%. Latin America and the Pacific region ex-Japan were among the poorest performers, with results of -13.3% and -9.5%, respectively.

Fixed-income markets fared no better than equities in September, as investors have become increasingly concerned about the potential for rising interest rates. The Fed continued to taper its asset purchases during the month, reducing purchases by an additional \$10 billion, and announced that the program would end completely in October. With this as a backdrop, the benchmark 10-year U.S. Treasury yield ended the month at 2.51%, up 17 basis points from the 2.34% level of August 31st. Broad-based fixed-income indices were mainly lower in September, with the Barclays U.S. Aggregate Bond Index declining -0.7% for the month. Global fixed-income markets performed extremely poorly, with the Barclays Global Aggregate ex-U.S. Index returning -4.3% for the month. Intermediate-term corporate bonds also suffered, as the Barclays U.S. Corporate 5-10 Year Index fell by -1.4%. The Barclays U.S. Corporate High Yield Index posted a loss of -2.1% for the month. Municipals continued their solid relative performance, posting a gain of +0.1%.

The Relative Strength Matrix provides an indication of how the various asset classes have performed relative to one another over the past 30 days. A number greater than 1.0 indicates that the asset class in the far left column has outperformed the corresponding asset class in the top row over the past 30 days. A number below 1.0 means the asset class on the left has underperformed the asset class at the top. The green shading indicates outperformance, and the red shading indicates underperformance.

INDEX OVERVIEW

The S&P 500 Index is an unmanaged index comprised of 500 widely held securities considered to be representative of the stock market in general. The S&P/Case-Shiller Home Price Indices measure the residential housing market, tracking changes in the value of the residential real estate market in 20 metropolitan regions across the United States. The Nasdaq Composite is a stock market index of the common stocks and similar securities listed on the NASDAQ stock market. The MSCI EAFE Index represents 21 developed markets outside of North America. The MSCI EAFE Growth Index is an unmanaged index considered representative of growth stocks of Europe, Australasia and the Far East. The MSCI EAFE Value Index is an unmanaged index considered representative of value stocks of Europe, Australasia and the Far East. The MSCI Emerging Markets Index is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets. The MSCI Europe Index is an unmanaged index considered representative of stocks of developed European countries. The MSCI Pacific Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of the developed markets in the Pacific region. The Barclays US Credit Index is an unmanaged index considered representative of publicly issued, SEC-registered US corporate and specified foreign debentures and secured notes. The Barclays US Aggregate Bond Index is a market capitalization-weighted index of investment-grade, fixed-rate debt issues, including government, corporate, asset-backed, and mortgage-backed securities, with maturities of at least one year. The Barclays US Corporate High Yield Index covers the USD-denominated, non-investment grade, fixed-rate, taxable corporate bond market. Securities are classified as high-yield if the middle rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below. The index may include emerging market debt. The Barclays Capital Municipal Bond Index is an unmanaged index comprised of investment-grade, fixed-rate municipal securities representative of the tax-exempt bond market in general. The Barclays US Treasury Total Return Index is an unmanaged index of public obligations of the US Treasury with a remaining maturity of one year or more. The Citigroup World Government Bond Index is a market capitalization weighted bond index consisting of the government bond markets of Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Ireland, Italy, Japan, Malaysia, Mexico, the Netherlands, Norway, Poland, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States. The DJ-UBS Commodity Index Total ReturnSM measures the collateralized returns from a basket of 19 commodity futures contracts representing the energy, precious metals, industrial metals, grains, softs and livestock sectors. The Russell 1000 Index is a market capitalization-weighted benchmark index made up of the 1000 largest U.S. companies in the Russell 3000 Index. The Russell 1000 Growth Index is an unmanaged index considered representative of large-cap growth stocks. The Russell 1000 Value Index is an unmanaged index considered representative of large-cap value stocks. The Russell 2000 Index is an unmanaged index considered representative of small-cap stocks. The Russell 2000 Growth Index is an unmanaged index considered representative of small-cap growth stocks. The Russell 2000 Value Index is an unmanaged index considered representative of small-cap value stocks. The Russell 3000 Index is an unmanaged index considered representative of the US stock market. The Russell Midcap Index is a subset of the Russell 1000 Index. It includes approximately 800 of the smallest securities based on a combination of their market cap and current index membership. The Russell Midcap Growth Index is an unmanaged index considered representative of mid-cap growth stocks. The Russell Midcap Value Index is an unmanaged index considered representative of mid-cap value stocks. The HFRX Indices are a series of benchmarks of hedge fund industry performance which are engineered to achieve representative performance of a larger universe of hedge fund strategies. Hedge Fund Research, Inc. employs the HFRX Methodology (UCITS compliant), a proprietary and highly quantitative process by which hedge funds are selected as constituents for the HFRX Indices. The ISM Non-Manufacturing Index is an index based on surveys of more than 400 non-manufacturing firms' purchasing and supply executives, within 60 sectors across the nation, by the Institute of Supply Management (ISM). The ISM Non-Manufacturing Index tracks economic data, like the ISM Non-Manufacturing Business Activity Index. A composite diffusion index is created based on the data from these surveys that monitors economic conditions of the nation. The ISM Manufacturing Index is an index based on surveys of more than 300 manufacturing firms by the Institute of Supply Management. The ISM Manufacturing Index monitors employment, production inventories, new orders and supplier deliveries. A composite diffusion index is created that monitors conditions in national manufacturing based on the data from these surveys. The Consumer Price Index (CPI) measures the change in the cost of a fixed basket of products and services. The Gross Domestic Product (GDP) rate is a measurement of the output of goods and services produced by labor and property located in the United States. Basis Point(s) is a unit that is equal to 1/100th of 1%, and is used to denote the change in a financial instrument. The basis point is commonly used for calculating changes in interest rates, equity indexes and the yield of a fixed-income security. The CBOE Volatility Index (VIX) is an up-to-the-minute market estimate of expected volatility that is calculated by using real-time S&P 500 Index option bid/ask quotes. The Index uses nearby and second nearby options with at least 8 days left to expiration and then weights them to yield a constant, 30-day measure of the expected volatility of the S&P 500 Index. The MSCI World ex-U.S. Index - captures large and mid-cap representation across 22 of 23 Developed Markets DM countries*--excluding the United States. With 1,002 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country. (* DM countries include: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland and the UK.) The MSCI Japan Index - is designed to measure the performance of the large and mid-cap segments of the Japanese market. With 320 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Japan. The Barclays Global Aggregate ex-U.S. Index - is a market capitalization-weighted index, meaning the securities in the index are weighted according to the market size of each bond type. Most U.S. traded investment grade bonds are represented. Municipal bonds, and Treasury Inflation-Protected Securities are excluded, due to tax treatment issues. The index includes Treasury securities, Government agency bonds, Mortgage-backed bonds, Corporate bonds, and a small amount of foreign bonds traded in U.S. The University of Michigan Consumer Sentiment Index (MCSI) is a survey of consumer confidence conducted by the University of Michigan. The Michigan Consumer Sentiment Index (MCSI) uses telephone surveys to gather information on consumer expectations regarding the overall economy. A separately managed account (SMA) is an individual managed investment account offered typically by a brokerage firm through one of their brokers or financial consultants and managed by independent investment management firms (often called money managers for short) and have varying fee structures. An open-end index fund continuously issues and redeems shares based on investor demand. As an index fund, its investment objective is to duplicate the performance of the index it uses as a benchmark. The MSCI EM (Emerging Markets) Latin America Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of emerging markets in Latin America.

The information, analysis, and opinions expressed herein are for general and educational purposes only. Nothing contained in this weekly review is intended to constitute legal, tax, accounting, securities, or investment advice, nor an opinion regarding the appropriateness of any investment, nor a solicitation of any type. All investments carry a certain risk, and there is no assurance that an investment will provide positive performance over any period of time. An investor may experience loss of principal. Investment decisions should always be made based on the investor's specific financial needs and objectives, goals, time horizon, and risk tolerance. The asset classes and/or investment strategies described may not be suitable for all investors and investors should consult with an investment advisor to determine the appropriate investment strategy. Past performance is not indicative of future results.

Information obtained from third party sources are believed to be reliable but not guaranteed. Envestnet|PMC™ makes no representation regarding the accuracy or completeness of information provided herein. All opinions and views constitute our judgments as of the date of writing and are subject to change at any time without notice.

Investments in smaller companies carry greater risk than is customarily associated with larger companies for various reasons such as volatility of earnings and prospects, higher failure rates, and limited markets, product lines or financial resources. Investing overseas involves special risks, including the volatility of currency exchange rates and, in some cases, limited geographic focus, political and economic instability, and relatively illiquid markets. Income (bond) securities are subject to interest rate risk, which is the risk that debt securities in a portfolio will decline in value because of increases in market interest rates. Exchange Traded Funds (ETFs) are subject to risks similar to those of stocks, such as market risk. Investing in ETFs may bear indirect fees and expenses charged by ETFs in addition to its direct fees and expenses, as well as indirectly bearing the principal risks of those ETFs. ETFs may trade at a discount to their net asset value and are subject to the market fluctuations of their underlying investments. Investing in commodities can be volatile and can suffer from periods of prolonged decline in value and may not be suitable for all investors. Index Performance is presented for illustrative purposes only and does not represent the performance of any specific investment product or portfolio. An investment cannot be made directly into an index.

Alternative Investments may have complex terms and features that are not easily understood and are not suitable for all investors. You should conduct your own due diligence to ensure you understand the features of the product before investing. Alternative investment strategies may employ a variety of hedging techniques and non-traditional instruments such as inverse and leveraged products. Certain hedging techniques include matched combinations that neutralize or offset individual risks such as merger arbitrage, long/short equity, convertible bond arbitrage and fixed-income arbitrage. Leveraged products are those that employ financial derivatives and debt to try to achieve a multiple (for example two or three times) of the return or inverse return of a stated index or benchmark over the course of a single day. Inverse products utilize short selling, derivatives trading, and other leveraged investment techniques, such as futures trading to achieve their objectives, mainly to track the inverse of their benchmarks. As with all investments, there is no assurance that any investment strategies will achieve their objectives or protect against losses.

Neither Envestnet, Envestnet|PMC™ nor its representatives render tax, accounting or legal advice. Any tax statements contained herein are not intended or written to be used, and cannot be used, for the purpose of avoiding U.S. federal, state, or local tax penalties. Taxpayers should always seek advice based on their own particular circumstances from an independent tax advisor.
